ABSTRACT

A method that involves receiving a message from a remote device, the message comprising either a definition, a state change, a command or some combination thereof; processing the definition (if any) before the state change (if

5 any); and processing the state change (if any) before processing the command (if any).

Another method that involves recognizing a dependence on a remote device; and sending a message to the remote device, the message comprising either a definition, a state change, a command or some combination thereof..

10 Also apparati having a processor and a memory coupled to the processor, the memory having stored therein sequences of instructions which, when executed by the processor, cause the processor to perform the above methods.
